NOTES

1. Obstacles up in the airspace around the Oshawa Executive Airport, such as temporary cranes, are a hazard to aviation safety. As such, it is important to inform pilots of the locations of these obstacles, as well as the time and date that they are going to be up in the airspace.

Also, there are limitations to the height that these temporary obstacles can be under the Oshawa Executive Airport Zoning Regulations. These heights vary depending on your location. In some circumstances, temporary exemptions can be granted to these limitations, however, this process can take up to sixty (60) days to complete.

2. **Processing Times:** The Oshawa Executive Airport will make every endeavour to process the permit application within 3 business days for cranes that are below the Airport Zoning limitations. As noted above, if you are eligible and require an exemption to the Zoning, it may take up to 60 business days to process your request.

Electronic submissions may also decrease the time required to properly assess a submission.

3. **Contact us:**
